RMW/cpm

S: See above. Still pain fourth and fifth digits, after surgery. She is taking some Lortab, Dr. Beranek put her on it and wanted her to take it 3 x day, she did not want to do that. He sent her back to Dr. Mitchum after Dr. Beranek left town, they had a run-in. She took her last Lortab 10 last night, does not always take it.

O: She is tearful. Extremities: Tinel's sign present over the ulnar nerve as it crosses the medial epicondyle.

A: Persistent tardy ulnar palsy despite surgery.

P: Discussed with Dr. Prince; he suggests using Lyrica, but I think we can get a little less expense out of Neurontin since it is now generic, and he agrees that is okay to try, 300 q.d., gradually to q.i.d. Lortab 10, #30, for bedtime use only, p.r.n.
